

# SILVERSHIELD<sup>®</sup> BY MICROBAN<sup>®</sup>

- Globally Registered
- No VOCs
- Works 24/7

NO OTHER SILVER TECHNOLOGY MEASURES UP.

NONDURABLE  
SILVER

SILVERSHIELD  
WITH DURALINK<sup>™</sup>

versus

UNRELIABLE

PROVEN

Some companies rely on heavily modified testing to demonstrate performance of their odor control finishes.

To ensure optimal real world performance, Microban uses industry recognized standards to test SilverShield treatment effectiveness.

These methods don't accurately predict performance under real world conditions

Store bought polyester activewear products treated with competitive silver technologies just don't measure up to SilverShield.

Findings show that SilverShield is more effective at reducing bacteria on fabrics than competitive silver products.

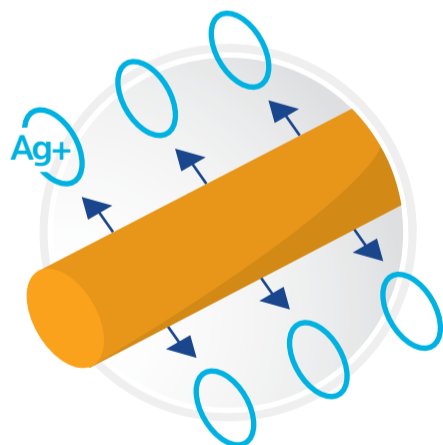

Once laundered, other silver technologies fail to demonstrate "permanent" odor control as their marketing promises.

SilverShield exhibited greater than 99% REDUCTION of odor causing bacteria on polyester after 25+ typical home launderings.

The Competition

Duralink Binder System

Surface bond fails to deliver on real world performance and washes away quickly.

The Duralink binder system infuses silver into the fibers of garments, which ensures your clothing stays fresh longer.

TESTED. PROVEN. BETTER.

SilverShield keeps your clothing fresher for longer by destroying odor-causing bacteria in textiles without sacrificing durability or longevity. And no other silver technology on the market can say that. So, in other words, it's game over for the competition.

PROTECTION THAT LIVES ON
